SurakshaPath

AI Women Safety Platform

Safer journeys. Faster help. Smarter prevention.

Team Members:

Abshar Alam, Nihal Singh Yadav,
Anish Kumar Thakur, Harshita Yadav

Prevention + Real-time Assistance + Emergency Response + Safety Analytics

OVERVIEW AND KEY FEATURES

One platform for the whole safety journey

AI Safe Route
Safer routes using incident data, time, route conditions and nearby emergency facilities.

One-Tap SOS
Instantly shares location and an emergency alert with trusted contacts.

Voice SOS
Configurable voice command for hands-free emergency activation.

Risk-Zone Map
Aggregated safety-risk areas and reported incidents.

Nearby Help
Finds police stations, hospitals and emergency facilities.

Trusted Circle
Family and friends receive trip and emergency alerts.

Low-Connectivity Mode
Keeps essential emergency functions available where technically possible.

AI Risk Engine
Explainable route and area-level safety indicators.

Today's safety tools are fragmented: maps ignore safety, SOS apps only react, and authorities lack anonymized data.

SurakshaPath unites prevention, real-time assistance, emergency response and analytics.

WORKFLOW

How it works

1. Enter Destination
2. Analyze Routes
3. Choose Safer Route
4. Start Trip
5. Monitor
6. SOS if Needed
7. Emergency Response
8. Incident Analytics

Before the trip: analyze and choose. During: monitor and alert. After: learn and prevent.

Prevent and assist

Pick a safer route first, then share the live trip with your Trusted Circle while you travel.

Respond fast

One-tap or voice SOS alerts contacts with location and surfaces nearby police and hospitals.

Learn and improve

Anonymized incident data feeds analytics that sharpen future route and area risk scores.

INTELLIGENCE

AI Risk Engine and safety analytics

- Incident data
- Time of day
- Route conditions
- Nearby emergency facilities

AI Risk Engine

Scores routes and areas

- Safer route suggestions
- Route-level risk indicators
- Area-level risk indicators
- Plain-language reasons

Admin dashboard: anonymized, aggregated insights for prevention

Hotspots

Anonymized safety hotspots mapped by area.

Trends

Patterns across time of day, days and seasons.

Incident patterns

Insights for authorities and planners to act early.

TRUST AND BUILD

Privacy by design and technology stack

PRIVACY

Consent-based sharing

Location shared only with permission, with people the user chooses.

Minimal data collection

Only what is needed to deliver safety features.

Anonymized analytics

Dashboards use aggregated data, never individual identities.

Explainable AI

Users can see why an area or route is rated as it is.

TECH STACK

Frontend

React / Next.js, TypeScript, Tailwind

Backend

Node.js

Database

PostgreSQL / Supabase

Maps

Maps API

Intelligence

AI / ML risk scoring

HACKINDIA

INNOVATION

Four pillars in one platform

- Prevention
- Real-time Assistance
- Emergency Response
- Data-driven Analytics

SurakshaPath

Safer journeys. Faster help. Smarter prevention.
